Real-Time Collaboration

Similar to Google Docs, multiple users can edit posts simultaneously with live syncing. Visual revisions allow color-coded comparison of changes.

Collaboration

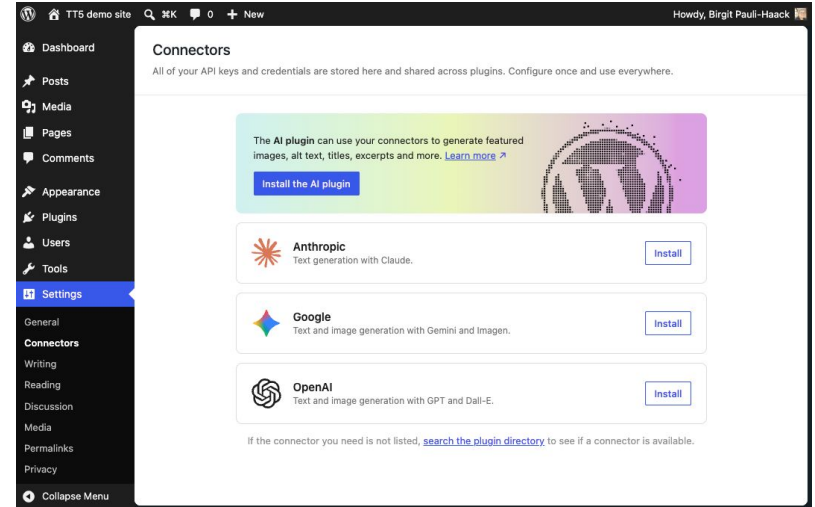

Enable early access to real-time collaboration. Real-time collaboration may affect your website's performance.

Post via email

Native AI Infrastructure

Connect to OpenAI, Claude, or Gemini and it automatically installs the right plugin and prompts you for your API key. Developers get a consistent framework to build on, enabling features like content generation, block building, and theme creation without reinventing the plumbing every time.

Enhanced & Faster Admin

The screenshot shows the WordPress 7.0 admin dashboard. The top navigation bar includes the WordPress logo, version number (7.0), search icon, user name (Howdy, admin), and utility buttons for Screen Options and Help. The left sidebar contains a menu with categories like Home, Updates, Posts, Media, Pages, Comments, Appearance, Plugins, Users, Tools, Settings, and Collapse Menu. The main content area is titled 'Dashboard' and features several widgets:

- Site Health Status:** A box indicating that site health checks will run periodically to gather information about the site. It includes a link to 'visit the Site Health screen'.
- Quick Draft:** A form for creating a new draft, with fields for Title and Content, and a 'Save Draft' button.
- At a Glance:** A summary box showing '1 Published post', '1 Published page', and '1 Comment'. It also notes 'WordPress 7.0-RC2 running Twenty Twenty-Five theme.'
- Activity:** A section for recent activity, including 'Recently Published' (a post titled 'Hello world!' published today at 8:08 am) and 'Recent Comments' (a comment from 'A WordPress Commenter' on 'Hello world!').
- WordPress Events and News:** A section for staying updated, featuring a location selector, a list of news items (e.g., 'WordPress 7.0 Release Candidate 2'), and links to Meetups, WordCamps, and News.

Gutenberg Blocks

- Two New Block
